

## IN THE CLAIMS

1. (Currently Amended) A method comprising:  
~~operating a managed network of consumer use processor based devices; and~~  
assigning distributed computing tasks to a network of said processor-based  
devices; and  
logging the tasks and the processor-based device assigned to each task.
2. (Original) The method of claim 1 including establishing a persistent connection  
between at least one of said devices and a server.
3. (Original) The method of claim 1 including subdividing a distributed computing job  
into tasks and assigning each of said tasks to a different device.
- Claim 4. (Canceled)
5. (Currently Amended) The method of claim 1 4 including developing an estimate  
of the time to task completion.
6. (Original) The method of claim 5 including, if no results are received after the  
passage of said time estimate, querying said device.
7. (Original) The method of claim 5 including automatically requesting said results  
after the passage of said time estimate.
8. (Currently Amended) The method of claim 1 including maintaining, from a  
server, the software on said devices.
9. (Original) The method of claim 1 including receiving the results of said task from a  
device and providing an acknowledgement to said device when the results are received correctly.

10. (Original) The method of claim 1 including receiving a completion message from a device and automatically establishing an upload session to receive the task results.

11. (Currently Amended) An article comprising a medium storing instructions that, if executed, enable a processor-based system to:

~~operate a managed network of consumer-use processor-based devices; and~~  
assign distributed computing tasks to a plurality of said processor-based devices;

and

log the tasks and the device assigned to complete said task.

12. (Original) The article of claim 11 further storing instructions that enable the processor-based system to establish a persistent connection between at least one of said devices and said system.

13. (Original) The article of claim 11 further storing instructions that enable the processor-based system to subdivide a distributed computing job into tasks and assign each of said tasks to a different device.

Claim 14. (Canceled)

15. (Currently Amended) The article of claim 11 14 further storing instructions that enable the processor-based system to develop an estimate of the time to task completion.

16. (Original) The article of claim 15 further storing instructions that enable the processor-based system to query a device if no results are received after the passage of said time estimate.

17. (Original) The article of claim 15 further storing instructions that enable the processor-based system to automatically request said results after the passage of said time estimate.

18. (Original) The article of claim 11 further storing instructions that enable the processor-based system to maintain the software on a device.

19. (Original) The article of claim 11 further storing instructions that enable the processor-based system to receive the results of a task from a device and provide an acknowledgement to said device when the results are received correctly.

20. (Original) The article of claim 11 further storing instructions that enable the processor-based system to receive a completion message from a device and automatically establish an upload session to receive the task results.

21. (Currently Amended) A system comprising:  
a processor-based device; and  
a storage coupled to said processor-based device storing instructions that, if executed, enable said device to operate a managed network of consumer-use processor-based clients, and assign distributed computing tasks to said processor-based clients, and log each task and the device assigned to complete said task.

22. (Original) The system of claim 21 wherein said system is a server.

23. (Original) The system of claim 22 wherein said server is a system management server.

24. (Original) The system of claim 21 wherein said processor-based device has a persistent connection with at least one consumer-use processor-based client.

25. (Original) The system of claim 21 wherein said storage stores instructions that enable said processor-based device to divide a distributed computing job into a plurality of tasks, assign said tasks to specific processor-based clients, and estimate the time to complete said job by said clients.

26. (New) The system of claim 21 further storing instructions to develop an estimate of the time to task completion.

27. (New) The system of claim 21 further storing instructions that, if no results are received after the passage of said time estimate, querying said device.

28. (New) The system of claim 26 further storing instructions to automatically request said results after the passage of said time estimate.
